

Care Management Technologies
Know More. Care Wisely.

Free Case Study Web Briefing sponsored by CMT and hosted by OPEN MINDS on October 25, 2016.

Reducing Avoidable Readmissions with Data Analytics: The Provider & Payer Perspectives

In an era of value-based purchasing and health care cost containment, high readmission rates have become a distinguishing mark of health care inefficiency - and reducing these high rates is now a focus of Federal and state government efforts. Central to reducing avoidable readmissions is improving the use of data analytics to deliver efficient, evidence-based care to individuals following a discharge. High-performing analytics platforms can produce actionable reports to be used as decision support throughout the care management process - from risk identification and stratification that defines the intensity of care management required, to continual reports showing adherence to treatment goals.

Join *OPEN MINDS*, Molina Healthcare of Illinois, Memorial Health System, and Chestnut Health Systems on October 25 at 1:30pm ET to hear how this Illinois-based behavioral health provider consortium joined together to create cost effective solutions to save Illinois payers money specifically in the area of hospital readmissions. Illinois is now in its third year of mandatory managed care, which covers 2.1 million of its 3 million Medicaid recipients. The session will provide both the providers' and payer's perspective on this arrangement including the risks, challenges, and rewards facing the payer when shared data is attempted.

During this 90-minute executive web briefing sponsored by Care Management Technologies (CMT), attendees will:

- Discover key strategies for creating dialogue between payers and providers for sharing data
- Uncover tactics for using data to reduce unnecessary hospitalization
- Identify key organizational or structural changes that may require their organization to take on shared savings for reducing hospital readmissions

REGISTER NOW!

The Webinar takes place Tuesday, October 25, 2016 at 1:30PM - 3:00PM EDT

All registrants will receive (at no charge and regardless of attendance) a recording of the webinar and an electronic copy of the presentation slides at its conclusion.
